

- Rapid reduction in the specific consumption of new cars: -1.7%/year on average for the EU; slower trends in early 2000's, mainly due to a saturation for new diesel cars (e.g. stabilisation at 5.9 l/100 km at EU level between 2001 and 2006).
- Strong improvement since 2005 for Denmark, France, Sweden, UK, Netherlands and Ireland
